

Supplied in flat pack format with easy-to-follow assembly instructions, each Fast Bake Oven is supplied with 4 x 1500W cassettes — each mountable in three standard height positions for your own unique application. The cassettes are fully dimmable, allowing you the flexibility to control your heat requirements for individual job. Optional controllers are available.

Depending on your requirements, the wiring of the four cassettes can be designed for your needs.

Technical data

Model	Width (mm)	Depth (mm)	Height (mm)	Watts (W)
FBO1	1650	1100	2000	4 x 1500
FBO2	2200	1100	2000	4 x 1500

The **Heatlight** infrared drying system

Makes short work of drying finishes on wood and metal

The Heatlight infrared drying system from Victory has been designed to meet the needs of busy manufacturers that need to quickly dry painted or coated wood and metal.

Victory has a long history of developing infrared products for a variety of industries, including automotive and plastics. This new system now draws on this experience to offer a much-needed solution for fast, efficient drying of finishes on wood products such as doors, panels and window frames with minimal risk of contamination by dust.

- **Fast drying time - minutes not hours**
- **Instant heat - no warm-up**
- **Mobile racking easily moves product around**

Reduce drying time from hours to minutes

Waiting for paint, varnishes and other finishes to dry slows down the manufacturing process, especially if products that need to be sprayed must wait for other items to dry first.

The Victory system means that the drying cabinet can be located away from the spraying or painting area. The mobile racking can be loaded with product and simply wheeled away, into the drying cabinet.

The system can be customised to suit customers' requirements.
